Secure Firearm Products didn't think they could do it, but they did. They have improved their high security cases and now the cases are even more secure than before!

December 2006 - Secure Firearm Products has redesigned and improved the security system of all their cases based on input from top shooting professionals.

The internal locking system has been redesigned to incorporate a user friendly push button one-key entry system with a Medeco Bi-Axial® lock. An optional removable core lock is available for special applications involving systematic re-keying (IE. Law Enforcement etc.).

The handgun cases have been streamlined in size with the same locking system as above but also have a removable high strength aircraft cable that can be locked in combination with the internal locking system to secure the case to the inside frame of a piece of luggage, therefore reducing the number of checked baggage. The handgun cases can also be locked and secured with the cable to the inside of a vehicle or other stationary device.

Secure Firearm Product's continued mission is to research and expand products based on customer feedback and the needs of the shooting sports industry.

For more information on the cases and other products, see their web site at www.securefirearmproducts.com, call 1.800.257-8744 or visit the Secure Firearm Products booth #2513 and their display in the New Product Center at the 2007 SHOT Show.
